PROFESSIONAL SUMMARY

Full Stack Developer with 2+ years of experience building end-to-end web applications. Specialized in React and TypeScript on the frontend, with Node.js and MongoDB on the backend. Production experience shipping features for a European AI-powered SaaS platform, plus freelance work delivering complete products for real clients (business websites, an online shop with interactive 3D products, WhatsApp automation bots) and my own apps with Supabase and Capacitor. Pragmatic, build-first mindset and comfortable working across the stack.

TECHNICAL SKILLS

Frontend: JavaScript, TypeScript, React, Next.js, Redux, HTML5, CSS3, Sass, Tailwind, Vite, Responsive Design
Backend: Node.js, Express.js, REST APIs, Supabase Edge Functions, Python
Databases & Cloud: MongoDB, PostgreSQL (Supabase, Auth, RLS), AWS (EC2, S3), Vercel, Git & GitHub
AI-Assisted Development: Claude Code, Cursor, prompt engineering for production agent workflows
Other: Capacitor (Android apps), Manual QA testing, Agile collaboration, MCP integrations

WORK EXPERIENCE

Web Developer (Freelance) — Client websites

Oct 2025 – Present

Websites and web apps for small and mid-sized businesses — end to end, from design to deployment

- Novagraf (novagraf.com.ar): new website for a packaging machinery manufacturer with a 7-line product catalog, spec sheets, quote requests and redirects from the legacy site.
- Marsela Rosso (marsselarosso.com): website with an essential oils shop, interactive 3D products (React Three Fiber) and WhatsApp checkout.
- Portfolio for a video editor, a services landing page with bookings and demo systems for bookings, building management and rentals (React, TypeScript, Vite).

Full Stack Developer — Viupik

Dec 2025 – Apr 2026

European real estate AI rendering & virtual home staging platform

- Built and maintained IA Studio 2, a React/TypeScript render management tool used by real estate professionals to generate AI-powered virtual staging at scale.
- Developed multi-step AI agent workflows (home staging, wall/floor editors, image enhancement), integrating multiple ML tools into a unified frontend experience.
- Contributed to the Node.js/MongoDB backend for batch image processing, user management, and render history.
- Shipped features end-to-end across design discussion, implementation, code review, and production deployment.

Full Stack Developer (Freelance) — Marssela Rosso

Jan 2024 – Nov 2025

Wellness business — sole technical contributor

- Designed and developed the main website in Next.js (deployed on Vercel), serving as the primary client acquisition channel.
- Built a complete WhatsApp bot in Node.js (whatsapp-web.js) for automated appointment booking, reminders, and business owner admin commands — replacing manual scheduling.
- Integrated MongoDB for appointment persistence, client history, and schema validation.

SELECTED PROJECTS

- **Despensa —** React, Capacitor, Supabase, Gemini API. Android + web home inventory app with AI receipt scanning, barcode scanner, shared household lists and an offline operation queue.

EDUCATION

Technical Degree in Programming — UCES (Universidad de Ciencias Empresariales y Sociales) *2023 – 2025*
Full Stack Developer Program — Digital House *2025 – Present*
Frontend Developer Certification — Coderhouse *2024 – 2025*

LANGUAGES

Spanish — Native **English** — B2 (Cambridge First Certificate in progress)
